

PRATIKO

The grafts PratiKO in polypropylene fibre nylon allows the creation of different box structures. The use of tubular metal framework 25 x 25 x 1.5 allows not to resort to the usual welds. This type of graft is available in various forms, has passed perfectly tests and shear strength developed by the Department of Materials Engineering and Production, University Federico II of Naples. The grafts allow easy application it for the realization of the bearing frames places within the advertising signs, optimizing time and labor costs.
